

Important notes regarding the charging, storage and disposal of the built-in battery

This device contains a built-in rechargeable lithium-ion battery, designed especially for this product. Please observe the following points in order to safely use the battery for a long time.

Cautions when recharging

- Unplug the cable once charging is finished

Once charging is finished, immediately unplug the charging cable from this device. Leaving the cable plugged in may degrade the battery.

- Do not cover the device or adapter when charging

When charging, do not cover this device or the adapter with a cloth, blanket or the like. This may cause heat to build up, which could lead to a very dangerous situation such as malfunction or fire. Charge the device in a well-ventilated place.

Storing the device when not used for a long time

If you will not be using the device for one month or longer, follow the steps below to avoid battery degradation when storing the device.

- Do not leave the device fully charged or discharged

Do not leave this device unused for long periods of time when it is fully charged or when the battery is totally depleted (and the power cannot be turned on). This may considerably shorten the battery life.

- Store the device about halfway charged

We recommend that you store this device at around a halfway charged state.

If the battery is fully depleted: charge the battery for a while until it is about halfway charged, and then turn off the power.

If the battery is fully charged: use the device for a while to partially discharge the battery, and then turn off the power.

- Storage environment

Avoid storing this device in direct sunlight, inside a hot car or other high temperature locations. We recommend that you store this device in a cool, dry place.

- Periodic recharging

The battery naturally discharges even while the device is being stored. Partially recharge the battery once every three to six months, so that it reaches around a halfway charged state before you store it again.

Disposal

When disposing of this product, remove the built-in battery*, and recycle the battery in an appropriate way by following the municipal regulations of the region in which you live.

*Depending on the product, the built-in battery may not be removable.
